

# SHORT DESCRIPTION ABOUT THE PRODUCT

This web app is for a Music artist who lives in Washinton dc, he create smooth loops like jazz loopy music he is also a dj. The client main think is to sell clothing and sell his music licences he creates. basicly this website will be like a e-commerce website where users can login, singup, create account check there dashboard.

functionality:

## Users

the users will have a signup page where they can sign up with google, or they can signup with their email and password.

On the sign up page there will be an error between the button and the form but this will show up if there is an error, the errors will be "Invalid email", "you already have created account with this email using google sign up or if he created account with the form will just be "using this email".

If the user chose sign in with email there will be an email input, password, confirm password, name and last name. The last name and last name won't be required.

Once the user will create a page there will be a page that tells the user that he should have a configuration email

The user will receive that page with an email template that you will create as well with big code. The user can change the password as well if he forgot the password and he will also get a configuration page that will let him to change his password as clicked that need to be designed as well.

Once the user enters the page he will see a dashboard on the left there will be a navigation bar:

### Profile Bar (the profile will be default first page)

The profile page will contain user name last name and the email address. If the user has not name his name will be Shadow User

There will be info on the profile page when he last logged in.

The user will also see how much points he earned by purchasing items in the website.

### Transaction Page

If there is a transaction made there will be an item or if there is more transactions there will be more items listed in a flex group, the image of the item he bought, the price, the date, quantity he got from the item, and points he earned purchasing that item.

### Cart Page

The cart page will be the user to see which items he has on the cart and if those are items are still available. The unavailable item will be in a lower opacity or with a gray text and unclickable to unclick or click.

Also in this page you will be able to modify your cart, delete it from the cart or edit quantity directly on the listing item.

### Settings Page

In the settings there will be a security section where the user can change their email address, or password.

There will be a notifications section as well where the user can unsubscribe to notifications, such as promotions, new items, etc or the user can subscribe to the page for a newsletter.

Delete Account section where the user can delete the account

Cart page where the user can change their payment information or add a new cart.

### Logout Page

The user will just log out if he clicks on the logout page.

## Home Page

The home page will have 4 sections and those will be: Hero section, Latest Clothing Products, Latest music products, Contact page.

### Hero Section

On the hero section there will be an image on the left and text on the right the text will be with heading 1 and a button below it takes you to the about page.

The image will be from Hendo sitting down.

The latest clothing will be 3 images of the latest clothing and if there is more than 3 it will start showing them all in a 2-second timer and there will be arrows left and right like a pagination system but without numbers below there will be dots. Also if you click on the product it will take you to the product page.

The latest music track it will be the same as a product page but here if you click on the music image it will start playing the song and there will be a song player below where you can pause or go next to the other song which it will slide you to the next song and instantly play if there is no next or previous this button will be gray so you can go back or forward.

Contact page it will be a simpler form with email name and the message input and of course a button. Also there will be an error report here between the button and the form also below there will be the text that this is a Google reCAPTCHA protected with the proper text that we use reCAPTCHA.

## Item Listing Clothing

The item listing page will be a simple ecommerce page with the search bar on top and the filters on the left. The filters on the left will be sort by price, sort by date, there will be shirts, and hats for now.

When you press the button on sort by size a two-up arrow will show if you hit it again it will be a down arrow and will start showing cheaper first. The shirt filters should be inside a t-shirt icon and the hat should be a minimal hat icon. Each product listed will have one image or more images if there are more images the product listed will slide for each second. So there will be dots below showing how many images the product has and which image is shown if it is shown the second image the dot will be bigger than the other dots.

Below the product image will be the name of the product with larger letters h3 maybe and below it will show the category what category is the item so if it is in hats it will say hats with the hat icon as the filter. Below will be a price with similar size as the heading of the image maybe h4 bold. If you click on the div it will take you to the single product page.

## Single Item Clothing

# Horny Rhino

## About Horny Rhino

Horny Rhino sell authentic items such as unique pearls, like ohrid pearls, high quality hats made from Italy, hand crafted jewelry, perfumes from most rare trees in the world with unique smell, wine from the best region from the world, vintage clothing, vintage furniture, vintage plates, not just selling vintage items it also sells a lot of hand made quality items as well, horny rhino is all about the details. Also horny rhino is very eco friendly brand, they never use plastic bags or waste trees.

## The Website

The website will be built with:

- Next.js 15.
- Firebase.
- tailwind css, and regular class css.
- react useContext.
- js-cookies.
- Stripe gateway

The website will have features as:

1. User Authorization
  - login and signup with email - password and google.
  - Auth Token for roles.

2. User Page
  - Profile page (update, edit or delete)
  - Purchase History
  - Cart
  - Wish List

3. Admin CMS.
  - Dashboard.
  - Add, Update and Delete products
  - Add, Update and delete Users.

The Authorization will be done with firebase auth, there will be.

- Email and Password Login, and Signin.
- Google login sign and sign in.
- anonymous
- Logout.

I will be using a react context to keep track of the user if is login or not, I will also keep a track of the error message in this context also loading (if the page is loading or not.)

I would like to use js-cookies to check if the user is login or not. If the user is login on the nav bar way on the right it will say "hi" "user name user last name (but only show the first letter of the last name)"

Let's say the user already created account with his gmail account "johndoe@gmail.com" using sign in with google.

and the user is trying to login with email and password, somehow he thinks that he made it with email and password. I would like a error popup to show saying you have made an account with using sign in with google, and on the error popup will be a button "login with google", and of course if the user clicks on the login with google, google auth will show up.

And also I would like to do this clockwise meaning if he signs up with email and password and trying to enter with google auth there will be a popup saying "you created an account using email and password please login with email or password or do you want to switch with login with google?" there will be also a button below the message "login with google" and if the user clicks on it from now on the user can login using email password and login with google, kinda a both if it is possible to do it using firebase auth.

# Colors

## Primary

### Used for:

- Logo.
- Nav Links Hover.
- Text Selection.
- Error

**css variable:** --pr-c-

Used for:

- Text
- Buttons

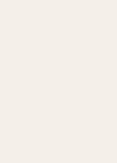

css: --txt-c

## Background

Used for:

- Background

css: --bg-c

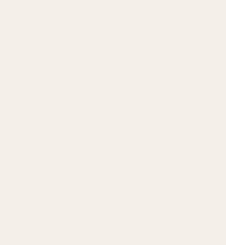

## Success

Used for:

- Success message

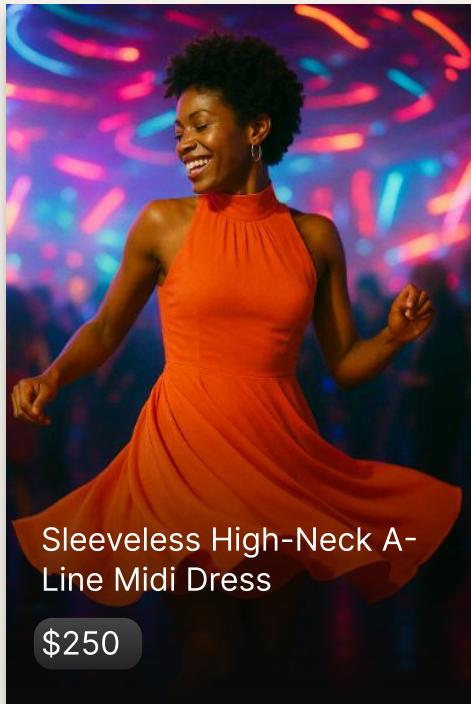

css: --sc-c
